

# URL Structure

Thursday, June 9, 2022 5:22 PM

`https://supermag.jhuapl.edu/services/page?start=start&logon=logon&extent=extent` page specific content

`pages` is the api that user is accessing  
can be checking inventory `inventory.php`  
checking indices, `indices.php` and getting  
data `data-api.php`

`start` is the starttime of the data the  
user wants the access.

`YYYY-MM-DDTHH:MM` 2003-10-30T00:00

`logon` is the username

`extent` is the length of the time user want data  
from. It is expressed in seconds with  
12 digits. 3600 seconds is `000000003600`

Page Specific Content:

`indices.php`

adds `flagstring` to the end:

`...&extent=extent&indices=indices&swi=swi&imf=imf`  
Only added if their corresponding  
var contains content.

`data-api.php`

on top of `flagstring` (added same way as in `indices.php`),

`station` is added to end.

`...&imf=imf&station=station`

note: `station` is in all caps
